

WHAT IS CLAIMED IS:

1. A fragrant ornament, comprising as a part of the ornament a fragrance container,
which is made of elastic material and has fragrance release pores that completely
or approximately hold aromatic substance inside and generally release fragrance
5 when a shape of said fragrance container is changed.
2. A fragrant ornament according to claim 1 further comprising said fragrance
container, which is capable of elastic deformation obtained by changing its shape,
so that said deformation enlarges effective diameters of fragrance release pores
10 that generally are the same as or smaller than said effective diameter of said
aromatic substance contained in said fragrance container.
3. A fragrant ornament according to claim 1 further comprising said fragrance
container capable of said elastic deformation that enables diameters of said
15 fragrance release pores, which are completely or approximately closed at steady
basis, to become larger than that of said aromatic substance by changing a shape
of said fragrance container.
4. A fragrant ornament according to claim 1 wherein the fragrance container is an
20 ornament body.
5. A fragrant ornament according to claim 1 wherein the fragrance container is a
core material, connecting at least one of a plurality of ornament bodies.

6. A fragrant ornament according to claim 5 wherein the fragrance container is a cord member attached to an ornament body.
7. A fragrant ornament according to claim 1 further comprising at least one of straps, bracelets, necklaces, key rings, earrings, underwear, shirts, jackets, anklets, straps for glasses, hair bands, employee ID card folders and their straps, belts, buckles, neckties, tiepins, chains for tiepins, brassieres, straps for brassieres, garters, garter belts, footwear, straps for footwear, and antislipping parts for footwear.
8. A fragrant ornament according to claim 1 further comprising said fragrant container or a part of its connected member has an injection hole for injecting said aromatic substance and an exhaust hole for exhausting air.
9. A fragrant ornament according to claim 8 further comprising at least one of said injection hole and said exhaust hole, which generally are closed or keep said effective diameter smaller than that of said aromatic substance, and change their shapes when injecting said aromatic substance, thereby allowing an aromatic substance injecting device and air to pass through said holes.
10. A fragrant ornament according to claim 9 further comprising one of an injector and a needle as said aromatic substance injecting device.
11. A fragrant ornament according to any of claim 1 further comprising said fragrant container, which has one tubular end, a tubular injecting device that is inserted

into said tubular end, a fixing member that fixes said tubular end of fragrant container to said injecting device by insertion, and a cap member that seals opening of the other end of said injecting device.

5 12. A fragrant ornament according to claim 11 further comprising said cap member, which doubles as a connecting part with other parts.

13. A fragrant ornament according to claim 11 further comprising said injecting device, which comprises connecting function so as to connect together.
